

The ULTIMATE Cap!

A lightweight, solar-charged headlamp, cunningly integrated into a fashionable cap! This innovative personal lighting system is environmentally friendly and yet extremely practical.

No need to look 'interesting' anymore, with a light attached to your forehead, or a torch clenched between your teeth! This cap will leave you "hands free in the dark" to do everything you have to do as you would in day light! No more fumbling about in the dark when camping, fishing, or working at night.

Simply wear your 2C Solar Cap by day for protection from the sun's UV rays (at the same time charging up the solar powered batteries), and by night you have 2 ultra-bright LED's able to emit light from beneath the Solar Cap's brim, all at the touch of a button.

No Battery needed

See & Be Seen

Micro-processor controls

Fishing, Boating, Camping

Charged by sunlight
